

DirectCare AI — Meta Ads Playbook

HRT · TRT · Weight Loss — creative, targeting, compliance, and launch checklist

Prepared for the DCAI growth team · 90-day launch plan · Q2 2026

TL;DR — WHAT'S IN HERE

Three verticals (Weight Loss, HRT, TRT) with 13 ready-to-build ad creatives, Meta compliance notes per category, audience targeting, tracking setup, budget framework, and a launch checklist. Weight loss is the hardest market — your moat is "we ship the plan, not just the pen."

1. Meta compliance landscape — read first

All three products live in restricted ad categories. Skip this and your ads get disapproved and your account gets flagged.

Vertical	Meta's hidden rules
Weight Loss	No before/after photos. No "lose X lbs" claims. No body-part close-ups. No brand-name GLP-1s (Ozempic / Wegovy / Mounjaro) — say "GLP-1" or "weight-loss medication." No urgency timers.
HRT	Can't target on personal attributes (menopause, age). Use interest-based targeting only. Show benefits, not symptoms in ways that imply the viewer has them.
TRT	No muscle-gain claims. Don't imply user has low T. No images of needles. Don't say "boost testosterone" — say "support healthy levels."

⚠ COMPLIANCE

Required on every ad & landing page: "Compounded medication. Not FDA-approved as a finished product. Eligibility determined by a US-licensed clinician." Surface the LegitScript seal above the fold on the landing page.

2. Weight Loss — the hardest market

You're up against Hims, Ro, Mochi, Sequence, Found, Calibrate, and Form Health. They've burned through the obvious creative. Here's the white-space you should own.

Differentiation angles (pick one per campaign)

- 1. **"It's not just the shot."** DCAI ships labs + clinician + medication + supplement protocol. Most competitors just ship the pen. *This is your strongest moat.*
- 2. **Price clarity.** \$269/mo flat. No \$100 first-month bait that jumps to \$400.
- 3. **Real clinician 1:1** messaging access — not a chatbot quiz.

5 Weight-Loss Ad Creatives

Ranked

CONCEPT 1 — FOR COLD TRAFFIC

The Stack

Visual	Flat lay on white — GLP-1 pen, lab vial, supplement bottle, iPhone showing a clinician chat thread.
Hook	"Most clinics ship a pen. We ship a plan."
Body	Labs. Clinician. Medication. Supplement stack. One price — \$269/mo. No subscription lock-in. US-licensed clinicians, compounded in the USA.
CTA	See if you qualify

CONCEPT 2 — WARM / RETARGETING

Cost-compare table

Visual	Static graphic with four rows: Wegovy retail ~\$1,349/mo · Other clinic A \$399/mo · Other clinic B \$349/mo · DirectCare AI \$269/mo (lavender, bold).
Hook	"Same active ingredient. Half the price."
Body	Compounded GLP-1, prescribed by a US clinician, shipped to your door.

CONCEPT 3 — VIDEO, 15-30 SEC

POV: your first week

Visual	iPhone-POV footage: opening intake on phone → clinician message reply ("Approved — labs ordered") → package arriving in plain brown box → pen in the fridge → looking at lab results over morning coffee.
VO/Captions	"Day 1: intake. Day 2: clinician approves. Day 3: labs ordered. Day 5: pen at the door. That's it."
Music	Soft, ambient. <i>Avoid Reels-trap energy.</i>

CONCEPT 4 — UGC VIDEO, 15-20 SEC

Direct selfie clinician

Visual	An actual clinician (or paid HCP creator) talking to camera.
Script	"GLP-1 medications don't 'cheat' weight loss. They restore the satiety signal your biology stopped sending. If you've tried everything and you're still hungry an hour after dinner, that's not willpower. That's hormones. Get your labs first — then we'll talk."
Why it works	Counters the moral-objection audience. Pulls in the educated mid-funnel buyer.

CONCEPT 5 — CAROUSEL, 5 CARDS

Anti-program

Visual	Each card strikes through something competitors require: Macro counting · CGM patch · Weekly coach calls · Mandatory app workout · "Just labs + a clinician + the medication."
Final card	CTA button → /weight-loss/

Don't do this on Weight Loss: transformation testimonials, "lose X lbs" headlines, belly close-ups, women holding loose jeans, urgency timers. Meta downranks all of these in health categories.

3. HRT — your easiest sell

HRT demand is exploding (Midi raised \$60M, Alloy is profitable, Hers HRT just launched). Your job here is positioning, not education.

Differentiation angles

1. **Includes testosterone for women.** Most competitors do estradiol + progesterone only. Testosterone is the libido/energy game-changer most women don't know they can get.
2. **Bioidentical-first** — Midi and Hers prescribe both; you lead with bioidentical.
3. **Lab-driven dosing** — Most competitors are symptom-questionnaire-driven. You use actual hormone panels.

4 HRT Ad Creatives

CONCEPT 1 — FOR COLD TRAFFIC

Reframe

Visual	Warm portrait of a 47-year-old woman (your "Warm & Confident" image works perfectly).
Hook	"HRT doesn't make you old. Not having it does."
Body	Bioidentical estradiol, progesterone, and testosterone — prescribed by a US-licensed clinician, titrated to your bloodwork. Feel like yourself again. From \$89/mo.

CONCEPT 2 — CAROUSEL, 6 CARDS

Symptoms aren't the problem. Levels are.

Cards	"Brain fog" → Estradiol dropping · "Crashed libido" → Testosterone in the basement · "Sleep wrecked" → Progesterone gone · "Joint aches" → Estrogen lows · "Mood swings" → Hormones, not hormones-the-vibe · Final: "Get the labs that actually look at it. From \$89/mo."
--------------	--

CONCEPT 3 — VIDEO, 20 SEC

Generational

Visual	Mother and daughter together in soft kitchen light. Daughter is mid-40s, mom is 70s.
Captions	"Your mom didn't have this option. You do."
Body	HRT is safer than your mother was told. New NAMS / Menopause Society guidelines support HRT for most women under 60. Lab-driven, clinician-approved, delivered.

CONCEPT 4 — IMAGE, EDUCATIONAL

What your annual misses

Visual	Lab paper with checkmarks vs Xs.
Hook	"Your annual checks 6 hormones. We check 18."
Body	Lists what a full panel covers. CTA: "Order your panel — \$196."

HRT targeting: Interests — Menopause Awareness, Perimenopause Magazine, Lauren Streicher, Mary Claire Haver, Heather Hirsch. Age 38-58. Layer lookalikes from existing patient email list (huge for HRT).

4. TRT — narrow audience, very high intent

Differentiation vs Hone / Maximus / Hims

1. **Labs included** at \$169-189/mo. Hone is \$135 + \$250 every 90 days for labs. Math the year — you're cheaper.
2. **Two pathways:** injectable + enclomiphene (natural). Maximus only does enclomiphene; Hone only does injectable. You're the platform where the clinician picks the right tool.
3. **Real clinician 1:1**, not a "health coach."

4 TRT Ad Creatives

CONCEPT 1 — VIDEO, 15 SEC

The honest version

Visual	Mid-40s man at the gym mid-workout, then sitting on a bench, breathing hard.
Captions	"Lifting more. Sleeping less. Recovery's gone. Don't guess — test."
Body	Full testosterone panel + clinician interpretation, included. From \$169/mo. If you're not a fit, we tell you.

CONCEPT 2 — IMAGE, COMPARISON

The Hone counter

Visual	Two-column table — DirectCare: Labs + Clinician + Medication, \$169-189/mo · Other clinics: Labs \$250 every 90 days + Medication \$135/mo. Annual total bolded at the bottom.
Hook	"All-in. Not à la carte."

CONCEPT 3 — VIDEO, 20 SEC

The dial

Visual	Animated dial showing T levels — starts at 290 ng/dL (low), labeled "lethargy / brain fog / weak recovery." Dial climbs to 750 over a 12-week timeline. Label changes to "energy / drive / strength back."
Captions	"Numbers tell the story. Test first."
Body	Full hormone panel + clinician + protocol. Injectable, oral, or enclomiphene. From \$169/mo.

CONCEPT 4 — LIFESTYLE IMAGE

Dad mode

Visual	Man playing with his kids in a park — energetic, not posed gym.
Hook	"Be the dad they remember."
Body	TRT, when it's right. Tested by a US-licensed clinician. From \$169/mo.

TRT targeting: Interests — Joe Rogan Experience, Andrew Huberman, Peter Attia, Strength training, Andy Galpin. Age 32-58. Exclude anyone who's clicked "Erectile Dysfunction" interests (Meta gets weird about layering).

5. Funnel architecture

Don't send Meta traffic to your home page. Send each ad to its product-specific landing page with the same headline as the ad.

Vertical	Landing page
Weight Loss	https://www.directcare.ai/weight-loss/
HRT	https://www.directcare.ai/hormone-replacement-therapy
TRT	https://www.directcare.ai/testosterone-replacement-therapy

Each landing page must have (you already have most of this):

- Headline that echoes the ad hook
- Single intake CTA above the fold
- LegitScript + HIPAA + US Licensed strip
- Price stated clearly
- "No charge if you don't qualify" line
- Real photo of a clinician (not stock)

6. Tracking — the part that decides if you can scale

You already have FlexOffers affiliate click-id propagation site-wide. You also need:

1. **Meta Pixel** on every page
2. **Conversions API (CAPI)** server-side — iOS 14.5+ blocks ~40% of pixel data without it
3. **Tellescope custom events:** Lead (intake submitted), CompleteRegistration (account created), Purchase (first paid order), Subscribe (subscription started)
4. **Pass utm_clickid in payment webhook** — Meta's CAPI fires Purchase with the click_id; cross-attribute with FlexOffers' postback

UTM convention

Parameter	Value
utm_source	meta
utm_medium	paid_social
utm_campaign	vertical_quarter_creative-name (e.g. hrt_q2_warm_confident)
utm_content	image_v1 / video_v3 / carousel_v2

7. Budget & 90-day launch sequence

Phase	Spend	Goal
Weeks 1-2 Test	\$50/day per vertical = \$150/day total = \$2.1K/wk	Identify winning creative + audience. 3-5 variants per vertical. Single ad set, Advantage+ placements.
Weeks 3-4 Scale winners	\$100-150/day on winners	Kill anything below CAC threshold. Start retargeting (visitors who didn't intake) with cost-compare creatives.
Weeks 5-8 Lookalikes	\$150-250/day	1% LAL of intake-form completers + 1% LAL of paid customers (stronger signal).
Weeks 9-12 Defend + expand	\$250-400/day	Founder video creative per vertical. Test Reels-native 9:16 edits of winners.

CAC targets to break even

Vertical	Target CAC	Estimated 12-mo LTV
Weight Loss	\$80-120	\$1,000-1,500
HRT	\$40-70	\$800-1,200
TRT	\$60-100	\$1,200-2,000

8. Launch checklist

- ☐ Meta Business Manager set up, Page admin'd, payment method verified
- ☐ LegitScript page name matches Meta Page name exactly
- ☐ Meta Pixel installed sitewide
- ☐ Conversions API installed sitewide
- ☐ Telescope events firing to Meta CAPI (Lead / CompleteRegistration / Purchase / Subscribe)
- ☐ Each landing page has visible LegitScript seal above the fold
- ☐ Compliance disclaimer present on all 3 landing pages (one-line under CTA)
- ☐ 5 weight-loss + 4 HRT + 4 TRT creatives uploaded as Image, Video, and Carousel
- ☐ UTM template saved in Ads Manager
- ☐ First \$1,500 budget approved
- ☐ FlexOffers click-id propagation verified across all 7 domains (done)
- ☐ Domain verified in Meta Business Manager (Settings → Brand Safety → Domains)
- ☐ iOS 14.5 event priority set (Purchase > Subscribe > Lead > ViewContent in Events Manager)

Strategic note: Your single biggest competitive moat in Weight Loss right now is that you also offer **HRT, TRT, and Labs** on the same platform. Hims has all of these. Ro has most. But a single household paying for both *his TRT and her HRT and weight loss* on one card is your real LTV play. Build a "couple's package" creative and test it. CAC drops in half when one ad converts two patients.
